About Me

Backend Software Engineer focused on building scalable web services, distributed systems and cloud solutions. Professional experience with **Elixir/Phoenix** in production and with **Java/Spring Boot** microservices architectures, complemented by **Python** backends on **AWS**. I care about clean, maintainable code and system reliability.

Experience

Sep 2025 – Present — **Junior Software Engineer**, *Bizneo HR*, Madrid, Spain (Remote)

After starting in the maintenance team, I moved to the development team, taking ownership of longer-term features and improvements.

- Develop, maintain and evolve backend services in **Elixir** and **Phoenix** using idiomatic functional patterns: new features, refactoring and bug fixing with a focus on code quality and scalability.
- Build interactive, real-time features (e.g. chat) with **Phoenix LiveView**, and asynchronous background processing with **Oban** (workers, backfills, long-running jobs).
- Write optimized **Ecto** queries and production data migrations on **PostgreSQL**; take part in deployments, monitoring and incident analysis on **AWS**.
- Collaborate through **Git**-based workflows, merge requests and code reviews.

Mar – Aug 2025 — **Software Engineer Intern**, *Real-Time Innovations (RTI)*, Granada, Spain

Enhanced a backend system for managing standard DDS type information, improving its performance and accessibility and easing client onboarding to RTI Connext. Involved end to end, from requirements and design to development and testing, following **Agile/Scrum**.

- Developed a serverless **REST API** in **Python** on **AWS Lambda** and **API Gateway**, using **ctypes** to interface with native **C** libraries.
- Contributed to an administration **CLI** tool (argparse, lxml) and adapted an existing web interface to consume the new API.

Projects

TusDeCAs — SaaS web platform (tusdecas.es), live in production, for generating the electronic transport control document (**DeCA**), mandatory in Spain since October 2026. Built with **Elixir**, **Phoenix** and **LiveView**: guided multi-step wizard with auto-fill, **QR** codes for roadside inspections, document version history and **PDF** delivery by email.

TempusUGR — Final Degree Project awarded with **Highest Honors**. Microservices-based scheduling platform for students and teachers, developed over **one year** with **Java**, **Spring Boot** and **Spring Cloud**. **Dockerized** architecture with **Eureka** service discovery, load balancing and robust authentication, plus an **Angular** frontend. Deployed on a university faculty server.

Cachopan — Buy-and-sell application for fish, developed over **six months**: **REST** backend in **Python** and **Flask**, and a cross-platform **Flutter** frontend. Deployed and actively maintained.

Education

2026 – 2027 — **Master's Degree in Software Development (IoT & Digital Transformation)**, *University of Granada*, in progress

2021 – 2025 — **Bachelor's Degree in Computer Engineering**, *University of Granada*, GPA: 8.4/10

2019 – 2021 — **Higher Technician in Telecommunications and Computer Systems**, *IES Luis Bueno Crespo*, GPA: 9.3/10, First-Class Honours

Skills

Backend — **Elixir** (Phoenix, LiveView, Ecto, Oban) ▪ **Java** (Spring Boot, Spring Cloud, Eureka, microservices) ▪ **Python** (Flask, REST APIs)

Cloud/DevOps — AWS (Lambda, API Gateway), Docker, Docker Compose, CI/CD, Git, Bash

Databases — PostgreSQL, MySQL, MongoDB, DynamoDB

Other — C, C++, Angular, Flutter, HTMX

Languages — Spanish (Native), English (B2 – Cambridge First Certificate)

Certificates — Spring Boot Microservices & Spring Cloud Eureka (2025) ▪ JavaScript Algorithms and Data Structures ▪ Cisco CCNA1 v7 ▪ MOOC Bioinformatics, Big Data & Machine Learning
